

Respiratory Multiplex PCR: Gauteng

Respiratory Virus Multiplex PCR: September findings

- The most frequently detected viruses during September were Rhino/Enterovirus (34%), Rhinovirus (24%), and Adenovirus (13%).
- The amount of Influenza A positive specimens detected has declined from 4% of specimens testing positive during August, to 2% of specimens testing positive during September.
- Please note: the Graph includes the combined data from the different Respiratory Multiplex assays offered by Ampath laboratories.
