Ampath Countrywide
August/September 2019

Respiratory Virus Multiplex PCR: Countrywide

Influenza A detection per week: Countrywide

Respiratory Virus Multiplex PCR: September findings

- The most frequently detected viruses during September were Rhino/Enterovirus (36%), Rhinovirus (24%), and Metapneumovirus (14%).
- There was a further decline in the amount of Influenza A virus detected countrywide:
 - From 16% overall during August to 7% overall during September.
 - During the last week of September only 3% of specimens tested positive for Influenza A.
- Please note: the Graph includes the combined data from different Respiratory Multiplex assays offered by Ampath laboratories.
