

Respiratory Virus PCR Statistics
Gauteng Province
July/August 2019

Respiratory Virus Multiplex PCR Findings

- The most frequently detected viruses during August were Rhinovirus (28%), Rhino/Enterovirus (25%) and Adenovirus (14%).
- The amount of Influenza A positive specimens detected has declined from 15% of specimens testing positive during July, to 4% of specimens testing positive during August.
- Please note: the Graph includes the combined data from the different Respiratory Multiplex assays offered by Ampath laboratories.
